

How did Dura Coat **improve** the industry's top-performing **coating?** By adding **more green** to every gallon.

Durapon
70
with Teflon

More and more architects, builders and coaters are specifying and applying Durapon 70™ from Dura Coat Products. As a premium PVDF coating, it is equal to or better than any coating on the market. And with the addition of Teflon® surface protector, the results get even better.

Now, for an even higher level of performance, our research labs have enhanced the coating and reached new heights in paint technology. By reducing the amount of VOC, we've raised the bar in performance — especially green performance.

You can be sure Durapon 70™, like all Dura Coat products, complies with LEED 29, Cool Roof and Energy Star standards, while giving you more top-performance miles from every green gallon. It's what you would expect from a company that specializes in commercial coil and spray coatings for metal.

Now you can get higher performance and more mileage out of your coatings. And more green. Visit www.duracoatproducts.com or call at 951-341-6500.

'CHELL' OUT

If someone commits a party foul on your upholstery—“Just chell out.” Coastal interior fabrics from **Chella Textiles** allow you to embrace party guests' offenses as well as the elements. Virtually maintenance-free fabrics are equally at home indoors and out, and Chella's solution-dyed acrylic fabrics, sheers and trimmings for upholstery and drapery resist sunlight, stains, water, wine and the like. Shown are Classic Epingle in Moss, Meander in Moss and Montecatini in Persimmon. Visit www.chellatextiles.com or **Circle 468**
